

Imperial Valley College Course Syllabus – Geology 110: Earth and Space Science

Basic Course Information

Semester	Fall 2016	Instructor Name	Kevin Marty
Course Title & #	Geology 110	Email	<u>kevin.marty@imperial.edu</u>
CRN #	CRN: 10060	Webpage (optional)	
Room	Online	Office	2776
Class Dates	August 15-December 9	Office Hours	5:15-6:15 pm, M-W, Room 2776; 1 hr online
Class Days	Online	Office Phone #	760-355-5761
Class Times	Online	Office contact if student will be out or emergency	Ofelia Duarte (Science Dept) at 760-355-6155
Units	3		

Important Dates: Orientation on Tuesday, August 16th from 2-3:25 pm in room 2733.

Three Tests: Tuesday, September 27th; Tuesday, October 25th and Tuesday, December 6th from 2-3:30 pm meet in the geology lab (room 2733)

Course Description

This introductory earth and space science course covers basic principles from the fields of geology, astronomy, oceanography, and meteorology. Minerals and rocks, natural processes acting at the earth's surface and within the Earth, plate tectonics, geologic time and dating, composition and motions of the Earth, solar system, phases of the moon, origin and life cycles of stars, galaxies, water movements, ocean floor, weather and climate, along with other related topics will be studied. (C-ID GEOL 120) (CSU, UC)

(more)

The Earth System is diverse and dynamic, featuring volcanoes, earthquakes, tsunamis, landslides, floods, hurricanes, tornadoes, and so on. As citizens, we want to understand what is going on in our natural world and which aspects directly affect us or are most interesting. Understanding past events helps us comprehend what has happened and begin to predict future events. With the Earth System (it's components being the Atmosphere, Hydrosphere-including ice, Biosphere, Geosphere and influences from Space or the Exosphere), we examine past events and current natural processes to understand how this past and these processes affect humans. We will examine Space, the evolution of the Solar System and how space affects Earth's systems.

Accordingly, this course looks at the processes and materials composing Earth's physical environment, for example, its landscapes, interior, air and water, and explores topics such as natural hazards and disasters, fossils, energy resources, and much more. This course also explores topics related to space, such as the evolution of stars and our solar system, and examines evidence of past impacts and the threat of impacts with space objects today. To do so, we will learn some underlying principles of the natural world, from small things like the very building blocks of matter (atoms), to large things, like the cause and effect of regional forces that build mountains (e.g., the Himalayas) and make new oceans (e.g., the Red Sea). These processes are active today on Earth, whether driven by the Sun or Earth's internal heat, and as mentioned above can culminate in earthquakes, volcanoes, landslides, ocean currents and hurricanes, all of which obviously affect humans.

Student Learning Outcomes

Upon course completion, the successful student will have acquired new skills, knowledge, and or attitudes as demonstrated by being able to:

- 1 Gain critical thinking skills while working on and completing weekly homework assignments which include applying methods such as Venn diagrams, rubrics, and concept maps. (ILO2)
- 2 Gain awareness of geological events, weather and climate patterns and oceanic circulation on a global scale and understand/evaluate why events/features occur where they do. Assessment done through various homework assignments. (ILO5)
- 3 Gain knowledge of geological, meteorological, astronomical and oceanic features and processes through lectures, research papers, exams and presentations. Ties to all objectives. (ILO4)

Course Objective

Upon satisfactory completion of the course, students will be able to:

1. Demonstrate a basic understanding of the nature of matter, and describe the movement of matter and energy through the natural processes on Earth.
2. Explain the character of the sediments, rocks, and minerals of which they are composed, and relate this to the rock cycle.
3. Identify and explain the major subdivisions of Earth and processes acting deep inside Earth that effect the environment at the Earth's surface.
4. Describe the time frame within which natural processes function, and learn ways geologists use to decipher Earth's history.
5. Demonstrate an understanding of the theory of plate tectonics and relate this to earthquakes, volcanoes, mountain building and the evolution of the physical world over million of years.
6. Identify the cause and effect of earthquakes and how they are measured, and the effect on people.
7. Characterize volcanic activity and identify its natural causes and impact on the environment.
8. Identify landscapes and source of sediments on the sea floor, and show the relationship between geology and ecology of the oceans.
9. Demonstrate knowledge of the dynamics of the sea by understanding near surface and deep sea circulation patterns and interaction with the atmosphere, and the composition and properties of sea water.
10. Identify the processes that effect sea level and shape the shoreline, and understand coastal environments.
11. Describe the composition and structure of the atmosphere, and examine atmospheric circulation, weather systems and storms, along with modern and past climates.
12. Describe the connection among ecology, climate and geology, and understand the character of the land surface and the agents that shape the landscape.
13. Explain the weathering process and the products of weathering.
14. Explain mass wasting and ways to avoid and prevent it.
15. Demonstrate a knowledge and understating of the role of water and wind in earth systems. Processes such as runoff, erosion, deflation and features such as stream, groundwater, and dune systems will be examined.
16. Explain the formation of glacier ice, the ways ice and ice deposits shape the landscape, and the connection between glaciers and other parts of Earth's systems.
17. Demonstrate a knowledge and understanding of the sun, the moon, the planets and other characteristics of the solar system and beyond.

Textbooks & Other Resources or Links

1) McConnell, D., and others. The Good Earth (Third/e). New York McGraw-Hill. e-Book through McGraw-Hill site (students will learn how to purchase an eBook through Blackboard during first week of class).

Three scientific themes are emphasized throughout the text: 1) scientific literacy; 2) Earth Science and the human experience; and, 3) the science of global change. This book will help you learn earth science concepts and processes on your own and complement what we do in class.

The Key Concepts and Terms List is your guide to what is important (found at the back of your class handbook). Required reading is listed in the right column of the Lecture Schedule later on in this document.

Checkpoints are found on nearly every page in each chapter. These checkpoints consist of a wide variety of learning methods from construction of Venn Diagrams to filling in rubrics and constructing concept maps. Some of these checkpoints along with sketches are linked to your lessons and are a key component to doing well on Exams.

Course Requirements and Instructional Methods

Course Philosophy and Teaching Method: The subject of Earth Science is as vast and diverse as the natural world around us. Together, we will explore and visualize this dynamic world in a number of ways; in no way will it be a static collection of facts. Accordingly, we will concentrate on understanding natural processes and how we explore and learn things about our planet, rather than terms and factual trivia. We will concentrate on active, inquiry-based learning and will learn how to observe, think about, and understand our place in the natural environment. The critical inquiry and observational skills that we cultivate this semester should be useful in any profession, since they give you an appreciation of how earth science processes in our natural world impact our environment and society.

It is your responsibility and obligation to complete the required readings each week and prior to any online quizzes (Lecture Quizzes are not assigned at this time; two quizzes are assigned under the Modules).

Course Expectations: My role in this class is to provide a framework that includes theory, best practices, activities, and assignments for you to utilize in the development of your knowledge, understanding, and skills. I care very much how and what you learn in this class, but I believe that you are responsible for participating in learning from the activities provided. This class requires significant preparation and reading.

Course Grading Based on Course Objectives

Grades:

In this course, your grade will be based on points that you earn. There are approximately 640 possible points, which are written out below:

Point Distribution Summary*	Points
Three Test @ 100 points each (300 points total)	~300
LearnSmart Assignments (12 @ 10 pts each)	~120
Weekly discussion boards AND/OR modules (12@ ~10-15 points each)	~120-180
Course Project: Disaster Tracking, Report and Essay with Map	~150
Total Points Possible	~690-750

Tests:

There are 3 total tests over four chapters each. Each of the 3 tests is worth 100 points, for a semester total of 300 points. The tests are completed online AND face-to-face and consist of 40 multiple choice/answer, true/false types questions (40 pts) taken online (between 6 am and 11:59 pm on the day of each test); and at 2 pm in the geology lab for test questions related to your checkpoint/sketch/short answer homework (60 pts) on the date of each test.

You can make up exams only if you have a note from a doctor, a letter from the university regarding some university-sponsored activity, a copy of a jury summons, a police report, or some other document that can be verified. This legitimate proof for why you cannot attend class that day must be provided to the instructor as far in advance of the exam as possible.

LearnSmart Assignments:

Your LearnSmart assignments are accessed through McGraw Hill’s website (by clicking on LearnSmart through Blackboard it will take you there). Here you will access to your eBook and LearnSmart assignments that help you understand and apply the course material. Each assignment is worth 10 points and will take approximately 60-90 minutes to complete. There will be four assignments open at one time (the four that apply to each specific test) but they will close on a weekly basis (for example, assignments for Chapters 1-4 are open now, but Chapter 1 will close this Sunday evening; Chapter 2 will close next Sunday evening and so on).

Checkpoint/Sketch Assignments:

Throughout each chapter are “Checkpoints,” which consist of a wide variety of learning methods. Some of these checkpoints along with lecture sketches (if applicable) have been assimilated and linked to a folder in each lesson for you to print out, work on and use as a study guide for each test; this is also required homework that I will collect at the beginning of each test (the homework that applies to each specific test; for example, I will collect homework for chapter’s 1-4 at the beginning of the face-to-face section of your first test). Again, please

Imperial Valley College Course Syllabus – Geology 110: Earth and Space Science

print these out, work on them, and organize them by chapter (staple it all together; no binders please) to turn in at the beginning of each test.

Modules:

There will be a few modules required during the semester. These modules are sometimes associated with your Discussion Boards and help you formulate a response to a Discussion Board question. Other Modules are associated with quizzes.

Discussion Boards:

Discussions are ways to present your viewpoint or what you have learned about a topic to the class; and to respond to your classmate's posts to further discussion on a topic. Discussions are completed through Blackboard and are generally worth 10 points each week. Sometimes an initial as well as a response post (to classmate's posts) are required.

Course Project: Natural Disaster Tracking Journal, Summary and Short Paper

The course project requires that you track natural disasters on a weekly basis, submit a report of your disasters near the end of the semester and a minimum 500 word essay and plotted map (also at the end of the semester) based on your tracking. This project is worth approximately 150 pts total (see "Lessons/Course Project" button on Blackboard for more).

Field Trip:

A hike is planned during the semester; details will be posted after the semester begins.

Due Dates:

The above assignments have specifically defined due dates as noted in the Course Schedule (see Table below) and under the "Lessons/Course Project" button in Blackboard. It is your responsibility to keep up on all due dates. The instructor will not assume the responsibility of reminding you that an assignment is due or that an exam will be given. Please note, late work is never accepted.

Score/Grade Posting:

All scores will be posted on Blackboard. You have 7 days after a score has been posted to dispute an entry. After the 7-day period, the score stands as entered. Do not wait until the end of the semester to check your scores. Grades are not assigned by a "curve", where a certain percent is assigned "A", "B", etc. Instead, you are competing against my expectations, not your classmates, and there is no predetermined percentage of "A", "B", and "C". The exact division between letter grades will not be determined until the final points are totaled, but the grade breaks will not be raised above typical values (e.g., the A-B grade break will be 90% or lower, etc.). No items are weighted—your grade is based solely on total points received. Please note also that I use Blackboard only to 'show' you your scores, but not to grade you. Any grade you see in blackboard is probably inaccurate, so only check to make sure your scores are recorded correctly...to figure out your approximate grade at any given point, add up to total points possible to the date you are figuring out your score, and divide that into the total points you have earned (which you will find through Blackboard)...then multiply that number by 100 to get your percentage.

Dates for Withdrawals:

There is a course withdrawal deadline—check the college calendar to find the course withdrawal deadline for this semester. The course withdrawal deadline is a no-tolerance policy. When the withdrawal period ends, students only have one option – a grade of F for the course.

Incomplete Grade:

A mark of “I” is given only when a student who is otherwise doing acceptable work is unable to complete a course because of an illness or other situation beyond the student’s control. The student is required to arrange for the completion of the course requirements with the instructor. The university does not allow instructors to assign a grade of “I” simply because a student has quit attending classes and/or completing assignments.

Attendance

- A student who fails to complete the first mandatory activity of an online class can be dropped by the instructor as if the first official meeting of that class. Should readmission be desired, the student’s status will be the same as that of any other student who desires to add a class. It is the student’s responsibility to drop or officially withdraw from the class. See the [IVC General Catalog](#) for details.
- Furthermore, students who fail to complete required activities for two consecutive weeks may be considered to have excessive absences and may be dropped.

Online Classroom “Netiquette “

- What is netiquette? Netiquette is internet manners, online etiquette, and digital etiquette all rolled into one word.
- Netiquette rules to remember: (1) identify yourself, (2) include a subject line, (3) avoid sarcasm, (4) respect others’ opinions and privacy, (5) acknowledge and return messages promptly, (6) copy with caution, (7) do not spam or junk mail, (8) be concise, (9) use appropriate language, (10) use appropriate emoticons (emotional icons) to help convey meaning, and (11) use appropriate intensifiers to help convey meaning [do not use ALL CAPS or multiple exclamation marks (!!!!)].

Academic Honesty

- Plagiarism is taking and presenting as one’s own the writings or ideas of others, without citing the source. You should understand the concept of plagiarism and keep it in mind when taking exams and preparing written materials. If you do not understand how to ‘cite a source’ correctly, you must ask for help.
- Cheating is defined as fraud, deceit, or dishonesty in an academic assignment, or using or attempting to use materials, or assisting others in using materials that are prohibited or inappropriate in the context of the academic assignment in question.
-
- Anyone caught cheating or will receive a zero (0) on the exam or assignment, and the instructor may report the incident to the Campus Disciplinary Officer, who may place related documentation in a file. Repeated acts of cheating may result in an F in the course and/or disciplinary action. Please refer to the General School Catalog for more information on academic dishonesty or other misconduct. Acts of cheating include, but are not limited to, the following: (a) plagiarism; (b) copying or attempting to copy from others during an examination or on an assignment; (c) communicating test information with another person during an examination; (d) allowing others to do an assignment or portion of an assignment; (e) using a commercial term paper service.

Additional Help – Discretionary Section and Language

Help Along The Way: Many students enter this class with a bit of anxiety. Other students may have various disabilities, including test anxiety, which may make traditional classroom environments very difficult. Don't worry, almost all such students before you have passed this course – many with very high grades! The success of many of these students, though, was in part because they attended class regularly, took advantage of my office hours, or obtained help from their peers. If you are having difficulty understanding the course work, please contact me immediately. Also, the college has learning centers, disability resource centers, and counseling centers to address the various needs of students. (see examples next):

- Blackboard support center: <http://bbcrm.edusupportcenter.com/ics/support/default.asp?deptID=8543>
- Learning Labs: There are several 'labs' on campus to assist you through the use of computers, tutors, or a combination. Please consult your college map for the Math Lab, Reading & Writing Lab, and Study Skills Center (library). Please speak to the instructor about labs unique to your specific program.
- Library Services: There is more to our library than just books. You have access to tutors in the Study Skills Center, study rooms for small groups, and online access to a wealth of resources.

Disabled Student Programs and Services (DSPS)

Any student with a documented disability who may need educational accommodations should notify the instructor or the Disabled Student Programs and Services (DSP&S) office as soon as possible. The DSP&S office is located in Building 2100, telephone 760-355-6313, if you feel you need to be evaluated for educational accommodations.

Student Counseling and Health Services

Students have counseling and health services available, provided by the pre-paid Student Health Fee. We now also have a fulltime mental health counselor. For information see <http://www.imperial.edu/students/student-health-center/>. The IVC Student Health Center is located in the Health Science building in Room 2109, telephone 760-355-6310.

Student Rights and Responsibilities

Students have the right to experience a positive learning environment and due process. For further information regarding student rights and responsibilities, please refer to the IVC General Catalog available online at http://www.imperial.edu/index.php?option=com_docman&task=doc_download&gid=4516&Itemid=762

Information Literacy

Imperial Valley College is dedicated to helping students skillfully discover, evaluate, and use information from all sources. Students can access tutorials at <http://www.imperial.edu/courses-and-programs/divisions/arts-and-letters/library-department/info-lit-tutorials/>

Anticipated Class Schedule / Calendar

Schedule for Geology 110 (online): Earth and Space Science, Fall 2016

- * All due dates and distribution of grade points is subject to change according to class needs.
****NOTE: for purposes of this online class, the week begins on Mondays at 12:01 am and ends on Sundays at 11:59 pm. Day 1 is Monday and Day 7 is Sunday (and, for example, Day 4 is Thursday) each week.**

Week of	Topic/Lecture/Test	Readings
Aug 15-21	Lesson 1: Introduction to course and Scientific Method; Get Books Intro Post Day 3, Response Posts Day 7 Scientific Method Post Day 5, Response Day 7 Complete Checkpoints/Sketches for Lesson 1	Chapter 1
Aug 22-28	Lesson 1 (Cont): Introduction to Earth Science Geology of National Parks Posts Day 5 and 7 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 1	Chapter 1
Aug 29-Sept 4	Lesson 2: Earth in Space Season's Module Assignment, Due Day 5 Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 2	Chapter 2
Sept 5-11	Lesson 3: Near Earth Objects NEO Module Post Due Day 5 Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 3	Chapter 3
Sept 12-25 (note: two week period covering Plate Tectonics)	Lesson 4: Plate Tectonics Plate Tectonics Module Post Due Day 5 Week 1 Journal Post due Day 6, Week's 1 and 2 LearnSmart Assignment due Day 7, Week's 1 and 2 Complete Checkpoints/Sketches for Lesson 4	Chapter 4 (two week period covering Plate Tectonics)
Sept 27	Test 1: in class from 2-3:30 pm Online opens at 6 am, closes at 11:59 pm -submit homework for chapter's 1-4 (staple together)	Test 1

Imperial Valley College Course Syllabus – Geology 110: Earth and Space Science

Sept 26-Oct 2	<p>Lesson 5: Earthquakes Earthquake Post Due Day 5 Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 5</p>	Chapter 5
Oct 3-9	<p>Lesson 6: Volcanoes Volcano Module and Quiz due day 5 Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 6</p>	Chapter 6
Oct 10-16	<p>Lesson 7: Rocks and Minerals Mineral Post due day 5 Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 7</p>	Chapter 7
Oct 17-23	<p>Lesson 8: Geologic Time Geologic Time Module and Quiz due day 5 Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 8</p>	Chapter 8
Oct 25	<p>Test 2: in class from 2-3:30 pm Online opens at 6 am, closes at 11:59 pm -submit homework for chapter's 5-8 (staple together)</p>	TEST 2
Oct 24-30	<p>Lesson 9: Oceans and Coastlines Discussion Board: Oceanic Post due day 5 Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 9</p>	Chapter 13
Oct 31-Nov 6	<p>Lesson 9: Oceans and Coastlines (cont) Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 9</p>	Chapter 13 cont
Nov 7-13	<p>Lesson 10: The Atmosphere Atmosphere Module and Quiz due day 5 OR Discussion Board Post (TBD) Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 10</p>	Chapter 14

Imperial Valley College Course Syllabus – Geology 110: Earth and Space Science

Nov 14-20	<p>Lesson 11: Weather Systems Space Weather Module and Quiz due day 5 OR Discussion Board Post (TBD) Journal Post due Day 6 LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 11</p>	Chapter 15
Nov 21-27	THANKSGIVING BREAK	THANKSGIVING BREAK
Nov 28-Dec 4	<p>Lesson 12: Climate and Climate Change Discussion Board: Climate Change Post due day 5 Disaster Tracking Assignment DUE DAY 7 (DEC 4); submit online LearnSmart Assignment due Day 7 Complete Checkpoints/Sketches for Lesson 12</p>	Chapter 16
Dec 6	<p>Test 3: in class from 2-3:30 pm Online opens at 6 am, closes at 11:59 pm -submit homework for chapter's 13-16 (staple together)</p>	Test 3
